## **DETAILED ACTION**

### ***Response to Amendment***

1. Amendment filed October 27, 2003 is acknowledged.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Claim Rejections - 35 USC § 103***

3. Claims 12-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis et al. (6,250,567) in view of Kubis (4,906,151).

Lewis et al. discloses a spray gun comprising: a gun body 14; an air nozzle ring 18; a trapezoid thread 51.

Lewis et al. does not disclose paint. The device of Lewis is for spraying single or multicomponent material such a polyurethane. The device of Lewis is not precluded from spraying paint. It would have been obvious to a person having ordinary skill in the art at the time of the invention to have provided paint to the device of Lewis et al. for a painted finish.

Additionally, Lewis et al. does not disclose the ranges of flank angle, thread height, root to crest clearance, flank clearance, pitch, core diameter and outer diameter tolerance, pitch tolerance, nominal diameter. Such parameters are known parameters of a trapezoid thread. Kubis discloses male and female trapozodial threads in figure 2 defining the diameters, thread height, root to crest clearance and flank clearance. It

would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided claimed ranges/values for optimization dependent on application criteria, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

### ***Response to Arguments***

4. Applicant's arguments filed October 27, 2003 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Lewis et al. teaches to use trapezoidal threads to "guide" the delivery tube 14 coaxially into position within the manifold 18 (Lewis et al., column 4, lines 40-43). Kubis is evidence that diameters, thread height, root to crest clearance and flank clearance are known parameters of a trapezoidal thread. It is knowledge within one of ordinary skill in the art to provide particular values or ranges of diameters, thread height, root to crest clearance and flank clearance for optimum or workable ranges.

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
